Data and Inequality: Uncovering the Hidden Geographies of Discrimination

Data and Inequality: Radical Geography is a groundbreaking work that explores the hidden geographies of discrimination, using data to expose the patterns and processes that perpetuate inequality. This book provides a powerful tool for understanding and addressing the root causes of social injustice.

The authors, a team of leading scholars in the field of radical geography, use geospatial analysis, spatial data, and GIS mapping to reveal the ways in which discrimination is embedded in the built environment. They show how the distribution of resources, such as housing, education, and healthcare, is often shaped by race, class, and gender.

Key Findings

Data and Inequality presents a wealth of evidence to support the authors' claims. Some of the key findings include:

- People of color are more likely to live in segregated neighborhoods with lower-quality housing, schools, and healthcare.

- Children who grow up in segregated neighborhoods are more likely to experience poverty, crime, and other social problems.

- The gap between the rich and the poor is growing wider, and this gap is reflected in the spatial distribution of wealth.

- Discrimination is not just a problem of the past; it is a continuing reality that shapes the lives of millions of people today.

Implications for Policy and Practice

The findings of Data and Inequality have important implications for policy and practice. The authors argue that we need to adopt a more radical approach to addressing inequality, one that focuses on changing the underlying structures that perpetuate discrimination.

They propose a number of specific policy recommendations, such as:

- Investing in affordable housing and community development in low-income neighborhoods

- Improving access to quality education and healthcare for all

- Enacting laws to protect against discrimination in housing, employment, and other areas

- Supporting community-based organizations that are working to address inequality

Data and Inequality is a powerful and timely book that provides a much-needed analysis of the hidden geographies of discrimination. The authors' findings are clear: discrimination is a continuing reality that shapes the lives of millions of people today. We need to adopt a more radical approach to addressing inequality, one that focuses on changing the underlying structures that perpetuate discrimination.
